Welcome

- Welcome

Welcome

Anton Teterin is an IT professional with a quarter-century of experience navigating the complexities of system administration, software architecture, and IT consultancy. He possesses a strong aptitude for problem-solving, evident in his ability to optimize networks and craft elegant solutions.

His technical toolkit encompasses system administration, cloud technologies, networking, and programming languages.

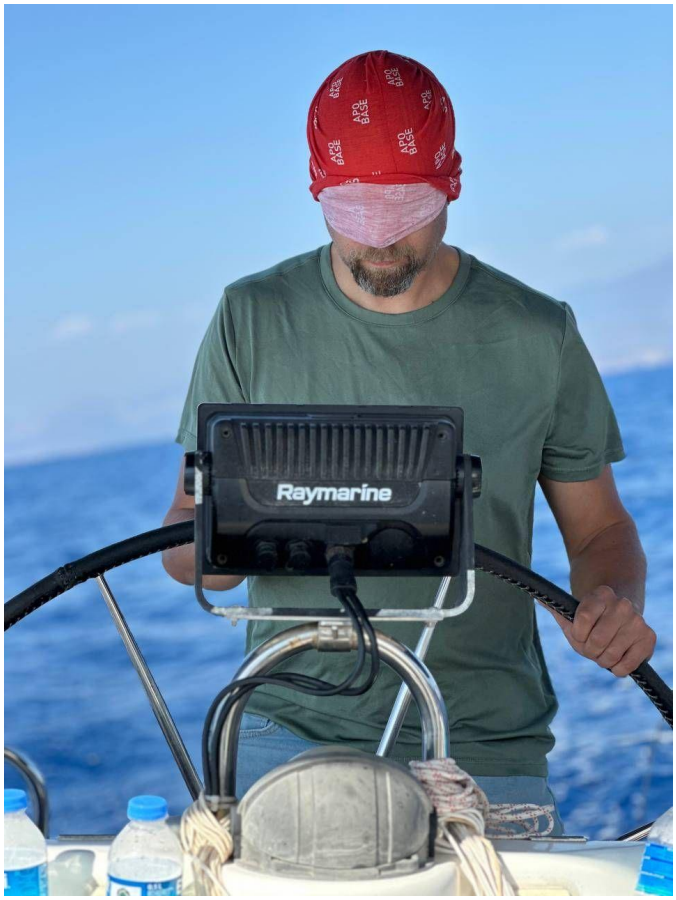

He demonstrates a consistent drive for continuous learning.

His guiding principles are "Denuntiatio solum translata valet / Only delivered message matters" and "Viam supervadet vadens / The Road will rise to meet the one who walks it," highlight his commitment to clear communication and a proactive approach.

Beyond his professional expertise, Anton embodies a 'MacGyver by soul' spirit, consistently finding creative solutions to diverse challenges. He is a self-taught computer generalist, driven by an insatiable curiosity and a desire to share his knowledge through articles and videos.

As a competition-oriented radio amateur, he thrives on pushing technological boundaries to create and engage classical approach and modern technologies to achieve hist goals. He is interested in electronics design, prototyping, constructing new devices, HF power amplifiers, antennas, and telegraph.

His adventurous spirit extends to the natural world, where he finds solace and challenge in mountains, hiking, and skiing. As a certified sailboat captain, he also navigates the open seas, demonstrating a dedication to mastering diverse skills. This unique combination of technical proficiency and adventurous spirit makes Anton a truly versatile and engaging individual."

November, 2024:
"*I had a great time sailing in the Mediterranean Sea last week. One of the experiments, I practised, is illustrated in the photo. This is about to feeling the inclination of the boat (see horizon) and adjusting the boat's course to capture the right wind in its full power.*
How could I reflect it to daily life? Every given moment, any system provides signals (by telemetry or routine behaviours), which can be captured, identified and presented in visual, audial or sensorimotoric ways. These signals, their amount, frequency and historical data tell what is going on within the system. The role of admin/ operator/ management or.. captain, in my case, is to capture feedback, analyse and make a decision on next action. "Be the wind of life with you." "

Anton writes updates in his journal.
